Student Upload File

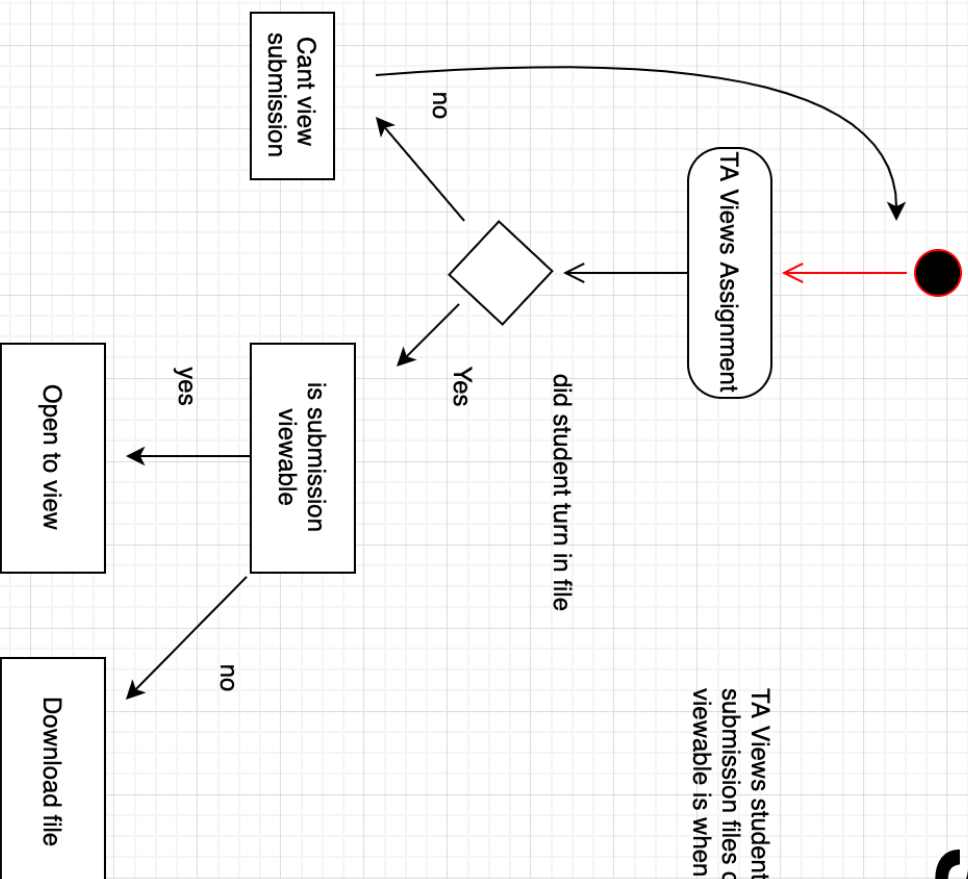

The student file upload activity allows the student to send a file to the database for submission. The system will apply any file type restriction specified by the instructor, verify the file is not too large, and will make sure there are no other files belonging to the student with the same name.

TA's View Submissions

TA Views student submissions activity allows the TA to view student submission files or or download them for grading purposes. only not viewable is when the student turns nothing in.

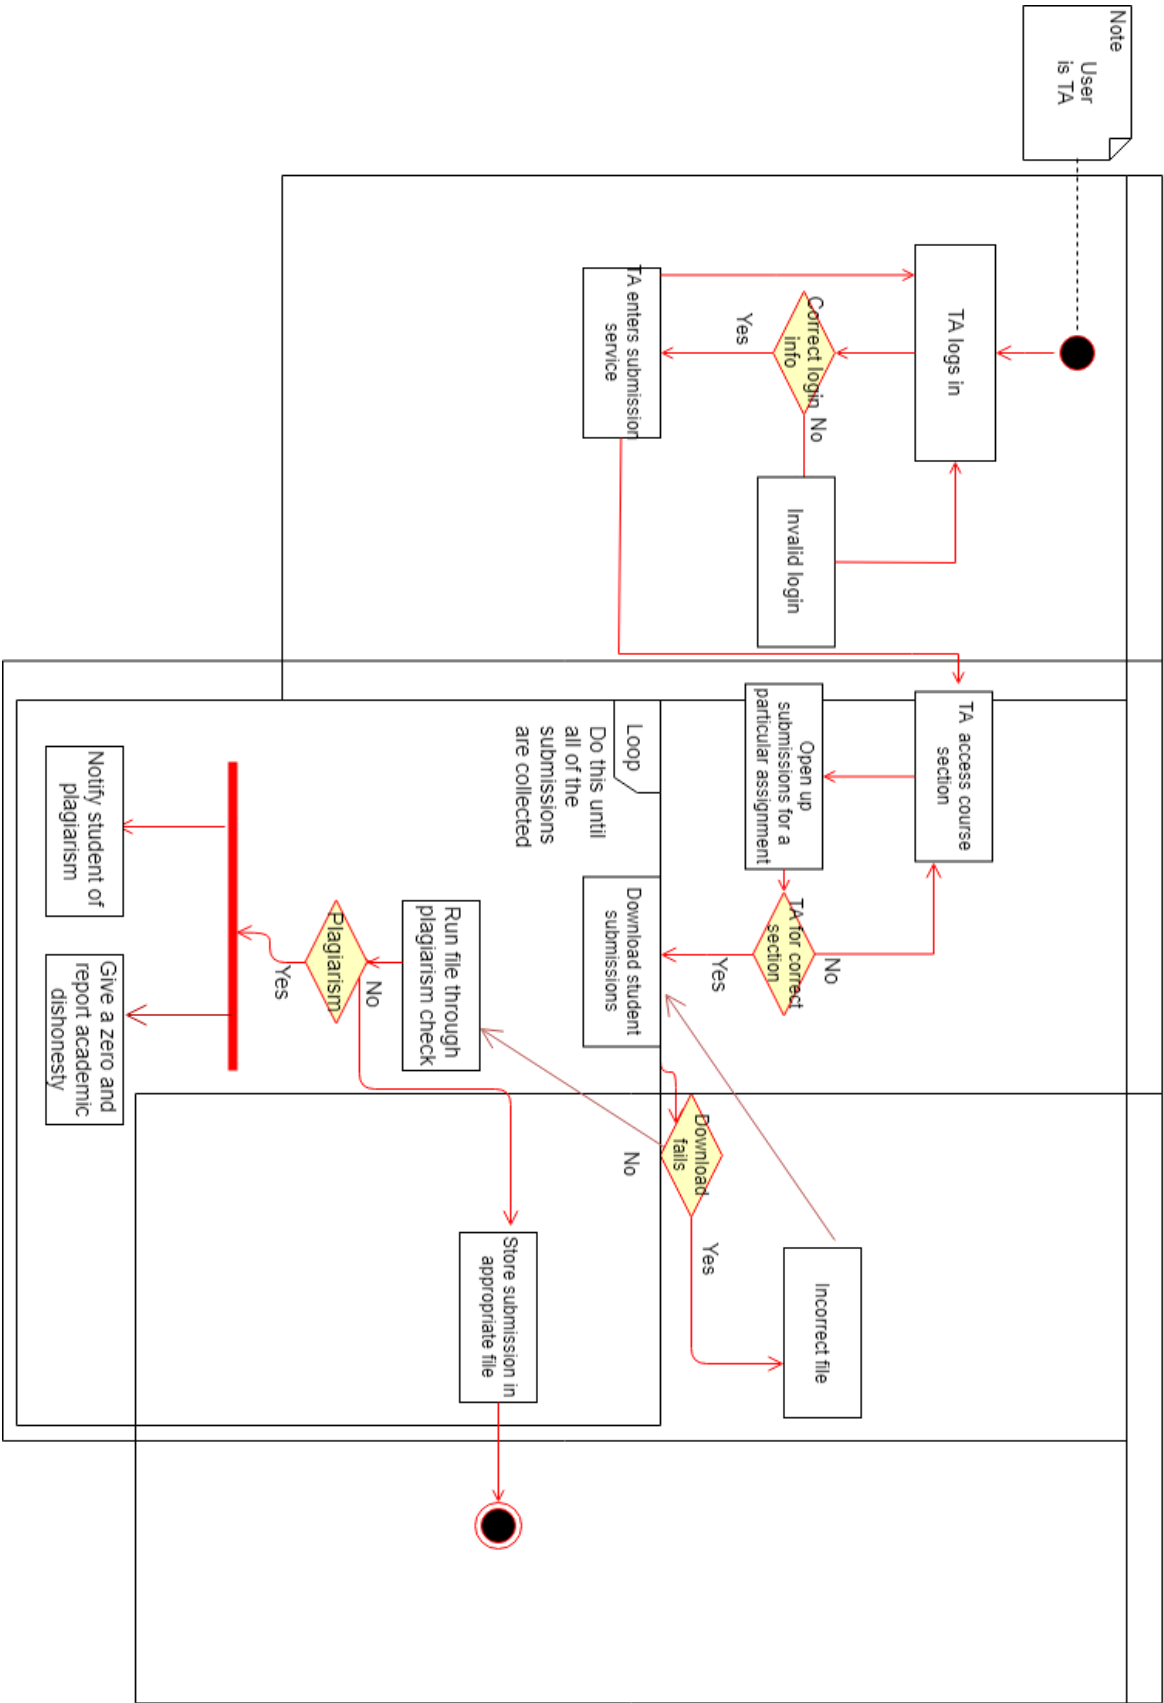

Contributors:
Davín Heilich

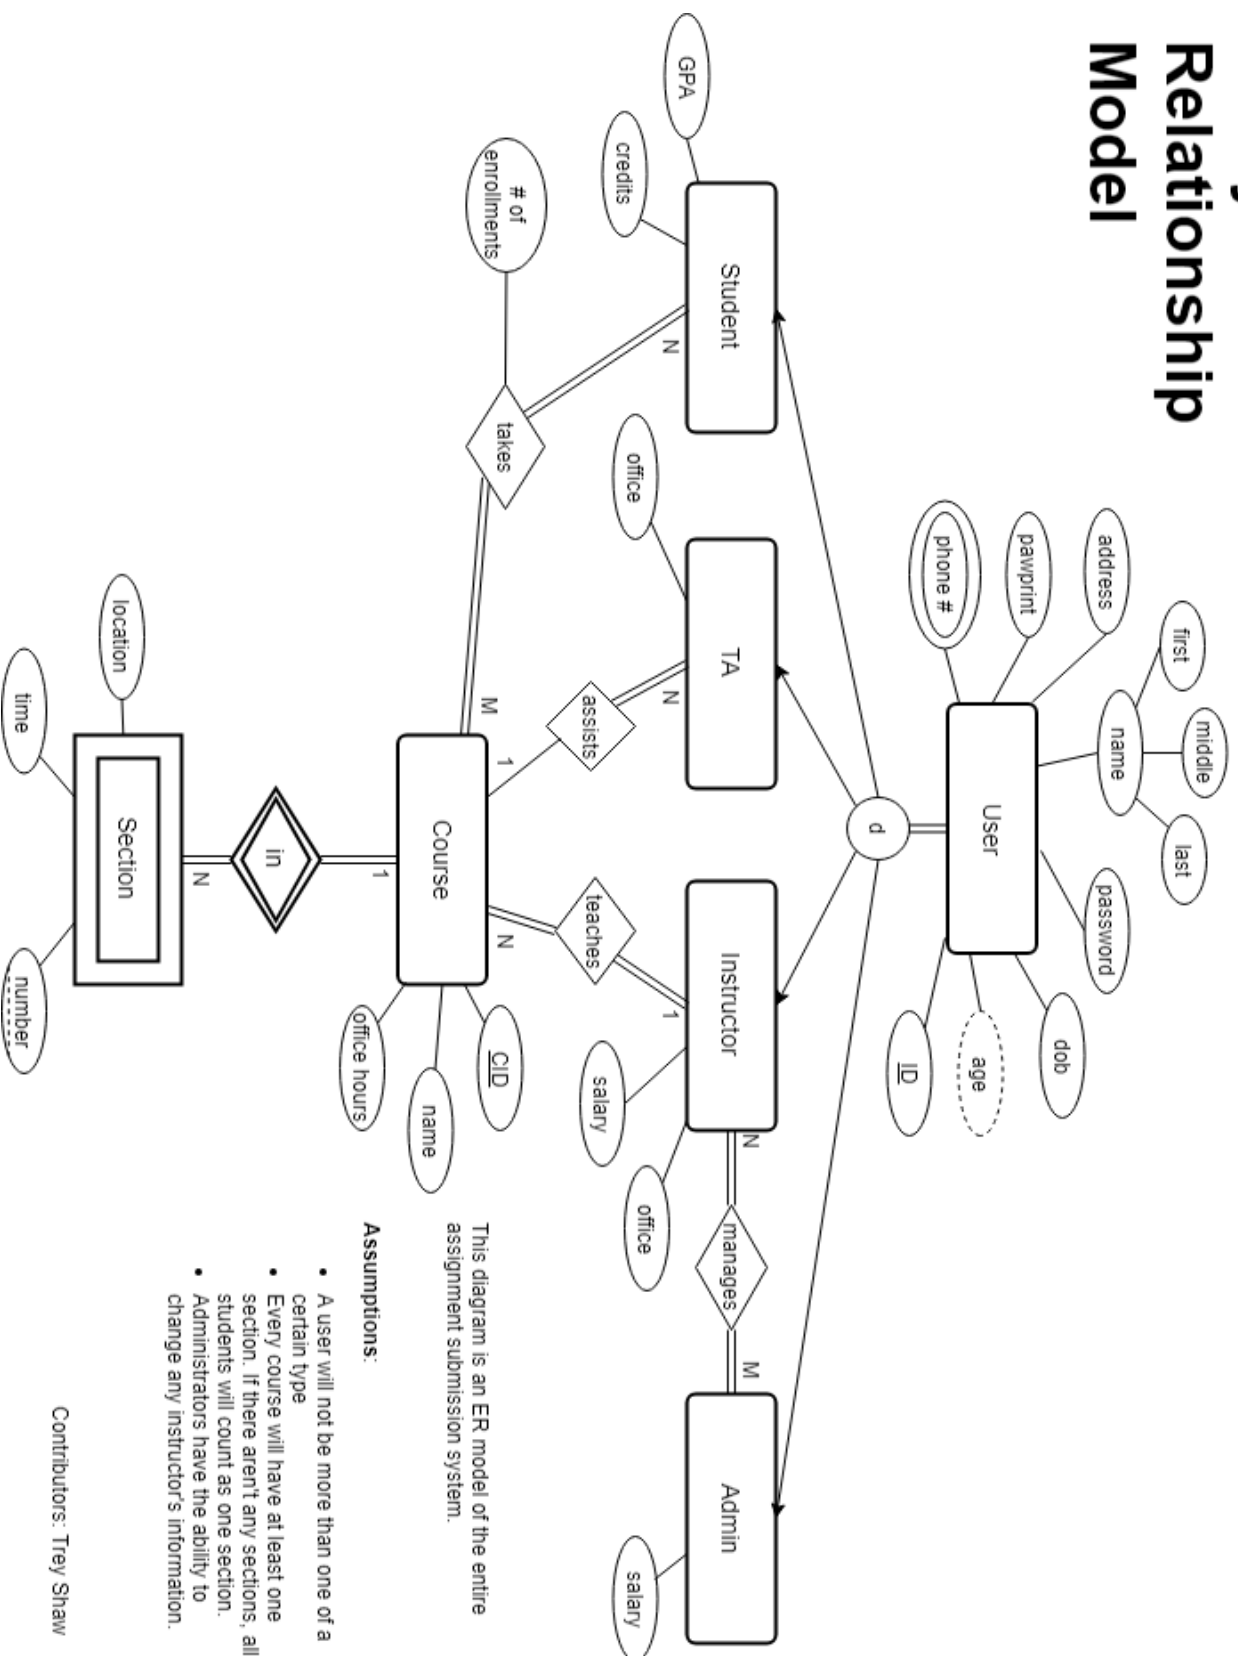

Activity:
Diagram:
Activity 5
for TA

The start of the diagram has the TA login and checks to make sure the login is valid. The diagram then goes through the TA opening up their assigned course section and downloading the submissions for the assignment. After all submissions have been saved, the end state is reached. A loop is inserted for downloading and saving each student submission, and appropriate checks for section, login, download and plagiarism are used.

Sequence Diagram:
Activity 1 for TA

The following sequence diagram has TA, login page, DBMS and the submission software as the objects. It starts with the user logging in, and a while loop is used to make sure the user is valid. Once they are verified, the course sections are shown.
